(I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate

Claim 3; Page 70-71; 193pp; English.

CC antirheumatic, antiarprinting, municipally and antiportective, tranquilliesr, antidepressant, antiinflammatory, antirheumatic, antiarthritic, immunosuppressive and antipsoriatic activities. They can be used as immune response inducers, nGPCR CC expression or activity modulators and in gene therapy. nGPCR CC expression or activity modulators and in gene therapy. nGPCR CC polynucleotide sequences can be used as probes to screen databases and concleic acid libraries, for screening restriction fragment length complete complete complete companying nGPCR sequences can be used in the treatment of diseases such companying nGPCR sequences can be used in the treatment of diseases such cas viral infections caused by human immunodeficiency virus (HIV)-1 or CC at virus cancers, diabetes, obesity, anorexia, hypotension, thrombosis, myocardial infarction, cardiomyopathies, cardiorescis, parkinson's disease, existence anxiety, comanic depression, dementia, Huntington's disease, thyroid disorders, can inflammatory conditions, rheumatoid arthritis, autoimmune disorders, companying conditions, rheumatoid arthritis, autoimmune disorders, companying conditions, renal failure, psoriasis, movement disorders. (nGPCR) proteins given in ABB06799 to ABB06867. The nGPCR sequences have vulnerary, antiasthmatic, anti-HIV, analgesic, cytostatic, antidiabetic, anorectic, metabolic, hypertensive, hypotensive, antiatherosclerotic, antiparkinsonian, cardiant, neuroleptic, antiparkinsonian, neuroleptic, n ABL50430 to ABL50496 encode the human novel G protein-coupled receptor have

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in the chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridization probes for mapping naturally occurring genomic sequences. GCREC is useful in Southern or northern analysis, dot blot or other membrane-based technologies, in pck technologies, in dipstick, pin, multiformat enzyme linked immunosorbant (ELISA)-like assays, and in microarrays utilising fluids or tissues from patients to detect altered GCREC expression. The present sequence is human GCREC-3 cDNA.
                                                                                                                                                                                                                                                                                                    tumour growth; thyroid disorder; myxoedema; renal failure; inflammatory condition; Crohn's disease; cell differentiation; homeostasis; rheumatoid arthritis; autoimmune disorder; movement disorder; central nervous system disorder; stroke; Huntington's disease; Tourette's Syndrome; Parkinson's disease; Alzheimer's disease; viral infection; human immunodeficiency virus; Alzheimer's disease; viral infection; human immunodeficiency virus; HIV; metabolic disorder; cardiovascular disease; type 2 diabetes; obesity; hypotension; hypertension; thrombosis; myocardial infarctic atherosclerosis; proliferative disease; hyperproliferative disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disorder (e.g., gastritis, cirrhosis, Crohn's disease), an autoimmune/inflammatory disorder (e.g., acquired immunodeficiency syndrome (AIDS), allergy, anaemia, asthma, rheumatoid arthritis), a metabolic disorder (e.g., diabetes, obesity, osteoporosis), and viral infections. GCREC is useful in a number of drug screening techniques, and to analyse the proteome of a tissue or cell type. GCREC is useful for creating knockin humanised animals or transgenic animals to model human diseases, in

                                                                                                                                                                                                                          54308
                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the genomic sequence of Pyrococcus abyssi and P. abyssi proteins (see AAB960813-AAB96842). P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is a fragment of the genomic sequence of P. abyssi. The 5' end of this sequence overlaps with the 3' end of AAH41223 and the 3' end of this sequence overlaps with the 5' end of AAH41225. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1 US-09-531-113-41876/c ; Sequence 41876, Application US/09531113

GENERAL INFORMATION:

```
APPLICANT: Byrum, Joseph R.
APPLICANT: Heck, Gregory R.
APPLICANT: Heck, Gregory R.
APPLICANT: Heck, Gregory R.
TITLE OF INVENTION: Nucleic Acid Molecules And Other Molecules Associated With TITLE OF INVENTION: Plants
FILE REFERENCE: 38-21(15761)B
CURRENT APPLICATION NUMBER: US/09/531,113
CURRENT FILING DATE: 2000-03-22
NUMBER OF SEQ ID NOS: 48629
SEQ ID NO 41876
LENGTH: 533
TYPE: DNA
ORGANISM: Glycine max
OTHER INFORMATION: Clone ID: JC-gmro02910026c05a1
US-09-531-113-41876
RESULT 2
PCT-US02-28445-13
Sequence 13, Application PC/TUS0228445
GENERAL INFORMATION:
APPLICANT: BASE PLANT SCIENCE GMBH
TITLE OF INVENTION: PROTEIN PHOSPHATASE STRESS-RELATED POLYPEPTIDES
TITLE OF INVENTION: METHODS OF USE IN PLANTS
FILE REFERENCE: 16313-0160
                                                                                                                                                                                                                                   Qy
